

Enabling rural providers to deliver continuous, reimbursable chronic care — using RHTP funding.

• "HIPAA" • "AI-Powered" • "2026 CMS Ready"

The Challenge

Rural providers carry a growing burden of chronic disease patients who cannot consistently access in-person care:

- Fragmented care for hypertension, diabetes, and CHF
- High preventable ER visits and readmissions
- Underutilized RPM/CCM billing — revenue left uncaptured
- Limited staff capacity to monitor patients between visits

Our Solution

mobriseHealth unifies patient management across providers with AI-powered RPM and CCM:

- Real-time clinical data sharing across distributed care teams
- Centralized RPM dashboards with automated alert workflows
- Fully integrated CCM for patients with 2+ chronic conditions
- 30-minute go-live — minimal IT burden for rural clinics

Proven Impact — Traction Metrics
